## Description

The Si-based pressure sensors which in their external design are comparable to the SML model can make use of the advantages of silicon technology. These benefits include lower overall production costs. Thanks to its design, all customary and client-specific pressure connection configurations are possible. Also, the complete range of electrical adapters, which are already known from the SML series, can be integrated.

Its modular design permits reasonable manufacture also in medium-size batches that can be supplied within short periods of time.
